## Hide Event Category?

Posted by sioux dax - 2012/10/20 14:25

---

Hello all:

I have Rainlendar on both my desktop and laptop machines. On my desktop I have a recurring event that displays as a yellow date number (instead of default white), and it will show the tooltip for it when I hover over the date, BUT I set it to NOT show in the event list. Essentially I had it set to hide the yellow category from the event list.

Now, I want to do the same on my laptop, but I cannot for the life of me find the option to hide a category from showing in the event list. I've tried exporting my settings from my desktop machine to the laptop, but they wouldn't import properly for some reason.

So can someone out there help me find the option to hide the yellow category from showing in the event list?

That's the setting I was looking for! Thank you so much! I didn't remember that it was hidden in the skin settings...

Thanks a million! :)
