
Outlook

Posted by bud1012 - 2007/01/16 13:14

Can not get R to report info from the outlook calendar or tasts.

I have downloaded the pro version, obtained the licence, gone to options > calendar and set up outlook. What else am I missing?

Thanks,

=====

Can you attach (or send to the support email) the Rainlendar's debug log? You can enable debugging by starting Rainlendar from the "Debug Rainlendar" shortcut in the program folder.

What is the version of Outlook you are using? If it's Outlook 2000 could you check if it is in Internet Mail Only mode (this should be visible in the Outlook's About dialog). According to Microsoft the IMO mode does not support Extended MAPI which means that Rainlendar will not be able to read the events from it.
