## Show only specified calendars

Posted by mcxme - 2012/11/20 12:36

---

Hallo,  
I want to have a detailed week preview which should show all my calendars.  
I have another more general calendar defined with Google Cal so I want to have a month view that does not show the detailed calendar which is also from Google Cal.

How can I achieve this?

(Another thing: is there any possibility to assign a predefined symbol / tag to all entries of a calendar? So I have a 'University' calendar and want the symbol 'School' to be assigned to each entry)

Thanks.  
Max.

Welcome to the forum, Max.

To include or exclude a calendar: right click on a window -> options... -> skins -> advanced>>> -> select the window in the right tree -> settings... -> in the lower section of the window you will find include/exclude calendars/categories.

(In this Advanced view you can add week and month windows, if you already didn't)

You can set a specific category to a calendar: right click -> calendars -> select the one you want -> in the lower section, change the "Visual category" option. This will work for GCals (which doesn't have a visual category by default).
