
Alarms no longer make sound Rainlendar2 Lite 2.10

Posted by agill - 2012/11/29 14:52

I've had Rainlendar2-Lite v2.10 for some time now and it has been working perfectly. But today the alarm sound stopped working. I'm on Mac OS X 10.6.8 (latest Snow Leopard)

To resolve it I tried resetting the disk permissions, and also changing the order of Rainlendar in the login items, but neither of those worked. I did a show package contents on the Rainlendar app, found the sound, tested it and it worked, so I copied it to another place on my drive and pointed to that via the Advanced Default alarm sound part of Rainlendar preferences. Still it doesn't work. I also tried pointing to another sound on my drive, and that also didn't work. I then tried reinstalling Rainlendar from the .dmg I downloaded originally, but that also didn't work.

Basically, for whatever reason, Rainlendar is now silent, no alarm sound, nothing when I refresh, change preference items, etc.

I've run out of ideas as to both why this happened and why it won't work whatever I do, so if anyone has any advice, I'd be very grateful as I need the alarms sounds to help me know what I have to do.

=====

I'm replying to myself as the alarm sound just started working again - I don't know why, but the latest thing I did was the reinstall, so maybe that resolved it?

Please don't respond to my original request as it's now okay. Thanks!
