
Rainlendar 2.11 BETA build 127

Posted by Rainy - 2012/12/09 08:03

Build 127 can be downloaded from here:

Windows (32-bit): Rainlendar-2.11.b127-32bit.zip
Windows (64-bit): Rainlendar-2.11.b127-64bit.zip
Linux TAR (32-bit): Rainlendar-2.11.b127-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.11.b127-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.11.b127-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.11.b127-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.11.b127.dmg

MD5SUMS-b127

The widget addon: Shadow4-Widgets.r2skin-addon

POT file for localization: rainlendar2.pot

This is beta version! It has not been tested.

Changes:

- o Shortcut keys in the message dialog buttons didn't work.
- o The manager sometimes crashed when viewing tasks that were in in progress state.
- o Filtering in manager's search worked only for the summary field instead all fields.
- o Adding new subtasks to Google calendar was not working.
- o It's possible to define every second saturday of the month as the weekend day.
- o The sorting of the event list can be reversed.
- o All text can be selected in the description editor with ctrl+a.
- o The digiclock in Shadow4 can have a title text.
- o Added screenshots to the help.

zh_TW localization uploaded.

Manager can not search in Description field.

"Filtering in manager's search worked only for the summary field instead all fields."

Thanks for fixing this!

Manager can not search in Description field.

True. The description field is not shown in the manager anymore so you also cannot search by it. I'll have to think if it would possible to add it back.

I have OS X Mountain Lion. There is no option to remove the icon from the Dock. I tried every possible way to remove the icon from the Dock, but it is still there. Additionally, when I try to change the "Time Format" into "%#l:%M %p (e.g. "3:42 pm")," the application still displays time in the EVENTS window with the "0," i.e., "03:42 pm". Finally, the tray icon should be a little bit bigger. I have Macbook Air 11" and it is really hard to see the date from a normal viewing distance. Please address these three issues in the following releases. Thanks for your consideration!

Welcome to the forum, Ashton.

To remove the tray icon: right click on a window -> options... -> skins -> advanced>>> -> in the "active skins" (right) click on trayicon -> click on the left arrow -> click ok.

The help file says: You can use the #-flag to remove the leading zeros (e.g. %#d). This works only in Windows though. So it doesn't work for OS X.

Apple changed something in Lion which breaks the top menu if the dock icon is removed so the option has been removed for now. I'll add it back if Apple fixes the problem in the future or if someone finds out a working way to remove the dock icon from a running application.

Manager can not search in Description field.

True. The description field is not shown in the manager anymore so you also cannot search by it. I'll have to think if it would possible to add it back.

I support adding feature for manager search in the free text area. Possibly a checkbox on the manager screen 'Search in Description' or better still in the advanced configuration area.

BTW if the description field is not shown in manager anymore does this mean manager doesn't load that text area at all (therefore no search capability), or more of a user convenience option?

If so, I suggest a 'mouse over' the item opens the description field, again - configurable on/off in the advanced setup.

Thanks,

=====

Hello,
I found an issue..
When You make an one day event and when it will end the same day as it starts it will not be shown in the event list.
Don't know if it occurs in every calendars. I noticed it on Google calendar.
In BETA 126 it was OK.
Thank You for further fixing :)

Re:Rainlendar 2.11 BETA build 127

I'm not able to reproduce the problem. Can you export the event in iCalendar format and attach it to here?

Re:Rainlendar 2.11 BETA build 127

Posted by ren7o - 2013/02/11 04:54

Hi,
here You go, every event which past the current day will be not shown in the list. No matter what You set in setting. (I mean the number of future or past days the list shows...) It is not working on local iCalendar as well.
Thanks for the effort. <http://www.rainlendar.net/cms/images/fbfiles/files/test-eadf85042bf5775ae261cf7391b1a84d.ics>

This bug affect also in a new profile with only 1 event in the default calendar. Changing "number of past days the list shows" not only not show past events, but add the number of days to the "future days".

This is an example:
Today is 2/11
Event on 2/9 (2 days before)
Event on 3/1 (18 days after)
Event on 3/2 (19 days after)
Number of past days showed: 12
Number of future days showed: 6

Result:
Event list only shows the event on 3/1.
