## When using Google Cal. where notes are stored?

Posted by PHATE69 - 2012/12/15 15:54

---

Hello there!

Thank you for your brilliant software. I would like to ask where are event notes stored when using a Google Calendar.

My point is, that when I am using a Rainlendar, I create many events with notes and addition info in it. What happens when I re-install my PC and tasks will be downloaded from Google again? Notes will be gone, right?

Or is there any file where data are stored offline until I connect online again? Is there notes contained as well? How could I backup them?

Thank you again,

Sebastian

Do you mean the event descriptions? They are written to the Google calendar events. Rainlendar does not store anything locally for the 3rd party calendars.
