
scrolling to future dates in Rainlendar Lite

Posted by akaoni - 2012/12/28 10:02

I expect that this will turn out to be a lame-brain, newbie sort of question, so my apologies in advance.

How do I view events and tasks on future days? I would expect to click on any date in the calendar on my desktop to open up that field, but that does nothing - I still see only today's events and tasks. When I click on the scroll arrows on the calendar or the left/right arrows on my keyboard, Rainlendar navigates between months, but not individual dates.

I understand how to insert new events and tasks for future dates, but isn't there a way to view what I've inputted on those dates?

Macbook pro 10.7.4.

Welcome to the forum, akaoni.

When you move the mouse to above the calendar's date, you should be able to see the all events in the day.

Thanks for trying, but hovering my mouse over the calendar does nothing. Clicking on the calendar does nothing. No dialog box pops up for me.

Again, I have Macintosh OS 10.7.4. Is this possibly a Mac only issue -- in other words, do you use Windows PC? Do any other Mac users have this problem?

Yes, I'm using Windows PC, but I think popup-box (tooltip) is also be able on Mac. If it not, please see here : http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&id=18369&catid=7#18369 maybe it can help you.

On Mac the calendar needs to be clicked once so that it gains the focus before the popups are shown on mouse over.

You can also see all your events in the manager dialog (right click over the calendar and choose Manager from the menu).

This is what is so baffling. Whether I click on the calendar, or option + click, nothing happens when I hover my mouse

over the calendar.

To be clear, I do have the drop down EVENTS and TO DO lists, which show tasks I scheduled for various days. Just can't get the pop up to work on specific dates.

Thanks!

Are you using some other than English language? There have been translation problems with some languages which can disable the Options->Advanced->"Show tooltips" setting to get disabled automatically because of duplicate setting names. If you use some other language try switching back to English and verify that the "Show tooltips" setting is enabled.
