
no appointments of yesterday in event list

Posted by Seidi - 2012/12/29 09:14

Hello,

today ip updated my Rainlendar Pro 64bit from b120 to b128, because of the update notification.

And now I cannot see my appointments from yesterday in the eventlist.

In the advanced options in the Event List category, I don't mark "hide past events" and I tried different numbers at "Numbers of past days the list shows" like 1;3;-1;-3, but the only difference in my event list is the amount of days I can see for future events, although I didn't change this number.

Please, can anyone help me, so I can see again my events of yesterday in my event list like in b120.

Seidi

I have the same version and the same problem.

I've made some testing and i've seen that Rainlendar show events only for the next ((Number of future days) + (Number of past days)) days.

Yep, that's a bug. I'll fix it.
