Hi! I have a problem. I recorded it through UVScreenCamera Project001.avi  
I use Google Calendar and when I create an event it appears and then disappears ... Help me.

Version 2.11 (b128) 64 bit Dec 29 2012

Welcome to the forum, neo4511.

I figured, that is normal, it is just a network delay.

I think, the reason is you set an immediate alarm time, but when you create event from Rainlendar, it maybe need some time to upload.

The first times appears in alarm window, maybe is because it is reading local data first (when event dialog be closed), then upload/sync with network (now disappears), then read new data and show (will appears again).

On my PC, the delay time is about 20 seconds.

Yes, the problem is exactly that. The alarm is first shown for the local event but is later replaced with the actual event after it has been read back from Google. There is a small delay before the alarms are checked so it takes some time for the event to appear again to the alarm window.
