Hi everybody!

I finally figured out, how to sync my iCloud calendar with rainlendar.

---

Hallo zusammen!

Ich habe endlich herausgefunden, wie man seinen iClod Kalender mit Rainlendar synchronisiert.

---

Go to the taskbar and do a right click on the rainlendar icon and click on "Options". If you disabled the taskbar icon, do the right click on your calendar.

In der Taskbar einen Rechtsklick auf das Rainlendar-Icon machen und "Einstellungen" anklicken. Wenn ihr das Taskbar-Icon ausgeblendet habt, macht den Rechtsklick auf euren Kalender.

---

1. Click on "Calendars" | 1. Klick auf "Kalender"
2. Click on "Add..." | 2. Klick auf "Hinzufügen..."

Sorry for the delayed answer, but I was on a trip to asia :)

@anoob: Maybe I'm doing something wrong, but when I follow the description in your link, I am not able to write an appointment (with rainlendar) into my iCloud calendar.

Is that right?

-----

Entschuldigt die verspätete Antwort, aber ich war auf ner Asienrundreise :)

@anoob: Vielleicht mache ich ja was falsch, aber wenn ich die Anleitung in deinem Link befolge, kann ich keine Termine (mit Rainlendar) in meinen iCloud Kalender eintragen.

Stimmt das?

Yes, Some people say: that way can only subscribe events from iCloud, but can not write new events with Rainlendar.

---

I don't know why? but it is in my PC worked perfectly when I test it.

There is a bug which prevents Rainlendar from reading tasks (or reminders) from iCloud but normal events should work fine. Rainlendar's debug log usually tells what is causing the problem with the CalDAV calendars. The log can be sent to me (use the Rainlendar's support address) if you cannot decode it yourself.
