## No window variables

Hello everybody! I just downloaded this skin <http://customize.org/rainlendar/skins/63524> for it's weather skin but when i tried to edit it's window height and width, the options were unavailable (as in non-existent, not greyed out)

How do I fix this so that I can increase the window dimension? Thanks to all for any views/support!

Welcome to the forum, AppleKing.

Yes, the weather window you used has not offer options to change "height" and "width".  
If you want to change the size of this window, you can try to change the value of "Scale".
