## categories become invisible events. skin: Savannah

Posted by Solstickan - 2013/01/09 03:49

---

So I tried setting up 5 more colors to the Savannah skin, plus renaming a few of them. Problem is.. the turn up completely invisible on the calendar.

I've been looking at both this one:

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=9&id=17009](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=9&id=17009)

Plus the ones he was linking.  
Plus searching the forum here.

And I've been in the elements.xml a hundred times. I did accidentally remove the in the end.. Bad me, but fixing that didn't help.

What I've done is copying the instances with the colors and changing all instances of that color to the new one. For instance,, I copied:

and switched the copy to:

And I did the same on the other places where there were colors.  
The categories and the template.

I did change name from Dark to Black as to not confuse it with a totally different instance that had black in it's name. (I used "Count" in the searchfield to see if I had duplicates and stuff).

The only thing I've found sofar that seems odd is that I have 9 instances of every color except green, that I have 11 of. Thing is.. Green seems to be a default-value, considering the original skin had this (which I have not changed):

Have any errors information in file of rainlendar2.log ?

p.s.  
you have twice :

---

That was true, thanks. I had a duplicate there.  
Removed one of them now. Didn't fix it tho, but atleast there is no duplicate.

Itried it in spoiler tags, but the log is so long i had to break it up in like several posts... so.. I uploaded it here instead.

<http://justpaste.it/rainlendarsavannahlol>

Happy reading. :P

---

I'll use my accidental doublepost here to update some findings.

---

I saw a few items in the log that were called ERROR.. only thing I actually new to search for. :P

11:31:44: ERROR: File/folder "C:\Program Files\Rainlendar2\skins\\_rzi\_0.032" is not a Rainlendar skin.  
11:31:44: ERROR: File/folder "C:\Program Files\Rainlendar2\skins\\_rzi\_0.894" is not a Rainlendar skin.

Appear everytime, and if I delete those files they just appear again when i refresh or restart rainlendar.

The whole log list is separated into 3 parts I've noticed... with DEBUG coming in the middle.  
The first part before the ----- ended with:

11:31:44: dofile  
11:31:44: Rainlendar\_GetElementValue  
11:31:44: Rainlendar\_UpdateComponent  
11:31:44: error  
11:31:44: debug  
11:31:44:

which didn't really say more that error.. and nothing more to it... Wierd.

Then there was alot of these errors too:

11:31:52: ERROR: Kalendermongo: Parsing of the Google event failed.

More or less a lot of them. I think it was like 20 or something of them this time, but it varies. Always the same thou, Kalendermongo, Parsing failed bladibladi.

If it enlightened anything I hope it might find a solution. :)

---

Sorry, I am not found any error info that could be causing this problem.

I saw that you are using Google calendar, so the log's contents of the majority are Google events.  
If you disable Google calendar and create a local calendar to test, Is it the same ?  
(if you do, the log will be more simpler)

---

Just realized why the logs where about 800k long. It never cleared the log when requesting it. So It just grew longer and longer.

I created a new calender, a local iCalendar called Test, cleared the log and restarted, then created an event. And nothing happened like before. Doesn't turn up, now it doesn't even add the item, before the big log (with googlecalendar) it was there if I doubleclicked it, then it stopped with that,, if I changed the color of an existing item it would simply be erased.

Now with the local calendar it is just the same as then, it erases.

I do need the google calendar thou, since my smartphone's only way of syncing with the computer is:

Rainlendar -> Google Calendar -> Phone

Since it uses Google Calendar. :P So I kindof need that, and seeing as it didn't solve the problem by using a local calendar,,, i don't really know what the problem is. o: But it's out there, somewhere. o:

I'll post the new log here that is now a lot shorter after I cleared it. :)

---

You have defined a list of included categories for the Month View window. Is that on purpose? The month calendar window won't show any events which don't have one of the included categories. Try clearing the list and see if you can see the event after that.

---

Took a look and saw the list with the wrong categorynames.  
I found out where to change them, so now the Included reads like this instead:

08:39:46:  
08:39:46: GrowUpwards=0  
08:39:46: WindowScale=100  
08:39:46: WindowVisible=1  
08:39:46: IncludedCalendars=  
08:39:46: ExcludedCalendars=  
08:39:46: IncludedCategories=Black;Blue;Brown;Cyan;Forest;Green;Olive;Orange;Pink;Red;Violet;Yellow

Which is correct, that is the names of the categories I'm trying to include.

For some reason.... Forest and Olive does work now.... but not the others...

If I go to Options/Skins now and press on Month View, then Settings and find that Included categories line, I can either write them down, or click them in a list.

I've written all of those down:

"Black" "Blue" "Brown" "Cyan" "Forest" "Green" "Olive" "Orange" "Pink" "Red" "Violet" "Yellow"

But if I click the list it looks like this:

Forest  
Olive

---

So for some reason the list is written so it's named both Color.. and ... but only Forest and Olive seems to work for the list. I do not understand this.

It would not surprise me if I've just missed like a . or a ; or something somewhere that I've removed by mistake, but I can't for the love of me find that out.

UPDATE: Okay, now I can't even see those .. Now it's only Forest and Olive in the list.. which do seem to work however. (yay!)... now.. about thosethat does not?

Also noticed tat the log seems to try to use Kalendermongo even if I tell it to use the new Test calendar,, I dunno, this adding of colors is the first time I actually make something in rainlendar outside the normal usage of it. So It all extremely new, and I've never done and XML before, only HTML, CSS and a tiny bittybit jQuery. x)  
Really though this would be a lot easier than it turned out to be. :)

I'll post both a log and the elements.xml again now how they look as of now.

Ooh, I did not notice before, you are using "Month View" instead of "Calendar".  
About categories, "Color" is not equal "", they are different.  
I think I have know what could causing the problem, should be you have not define correctly or completely.  
But I still need to confirm some things about like what you had done, so, Can you send your Savannah.r2skin file to me?  
(see my signature to find my email)

Well, let me say a little clearer :  
If you want to change the appearance of categories, display on "Month View", from categories-settings-box, you only need change "Schedule background", "Schedule text color", "Schedule text shadow color".
