
Problem: entry '\Excluded Categories\' appears...

...more than once in group 'Overriden Settings'...

Hi!

Since the last upgrade, everytime Rainlendar start i get a popup with the message above (logfile attached as .txt). The only skin i use is Savannah (Chromophore and Shadow deleted).

It seems Rainlendar ist working fine, but it gets a bit annoying.

Any idea? And thanks in advance.

Looks like there are duplicated settings stored in the config file.

According to the log file, if there are duplicates then you can remove one of them. Try first creating a backup, then open the config file (C:\Users\...\rainlendar2\rainlendar2.ini in your case) with a text editor with line numbering and remove one by one the lines 6xx listed in the log file.

These are overriden settings, they replace the default values and removing them (and only them) wouldn't remove any calendar data.

The hard way (or too easy?) would be reset all settings, just like a reinstall...

Yeah, i thought something like that. And i chose the "easy-hard-way". Searching for every single line sounded like a bit too much to do. ;-)

Thanks for the answer!
