## Dont see Google Calendar Data

Posted by Justin534 - 2013/01/22 22:32

---

Hi I just ordered the license file for the pro version so I could use my google calendar. However, it doesn't look like Rainlendar is actually getting any of my google calendar information. I attached a screenshot as well.

Also I am currently using Linux Ubuntu 12.10 64 bit with Rainlendar Pro Version 2.11 (b128) 64 bit having installed from the .deb package.

Thanks for the help!

Check from Rainlendar's debug log if there are any errors related to the Google calendar.

---

## Re: Dont see Google Calendar Data

---

This might be relevant from the log:

```
11:53:51 PM: Google Calendar-Class Schedule-Offline: Reading offline file
"/home/justin/.config/.rainlendar2/backups/Google Calendar-Class Schedule-Offline.ics"
11:53:54 PM: Class Schedule: Authenticating...
11:53:54 PM: Class Schedule: Result: (0) 403 Forbidden.
11:53:54 PM: Error=BadAuthentication
```

However, I do have the correct email and password.

If you are upgrade from older version, because the newest version use a new way to encrypt/decrypt password, so you need to re-enter your password (cleared first then input again), let the newest version use the new way to re-encrypt your password.

---

Its the first time I've installed it. I've also deleted the calendar, then gone Options > Calendars > add google calendar (enter email/password) > selected calendar/ set task list name to none > OK, several times but doesnt seem to change anything.

03:12:46 PM: Available plugins:
03:12:46 PM: CalDAV Calendar (1.0.128)
03:12:46 PM: Toodledo (1.1.128)
03:12:46 PM: Google Calendar (1.10.128)
03:12:46 PM: iCalendar Format (1.10.128)
03:12:46 PM: Remember The Milk (1.5.128)
03:12:46 PM: Comma Separated Values (1.2.128)
03:12:46 PM: Network Shared Calendar (1.10.128)
03:12:46 PM: WARNING: Default: The file "/home/justin/.config/.rainlendar2/Default.ics" does not exist.
03:12:47 PM: Class Schedule: Authenticating...
03:12:47 PM: Class Schedule: Result: (0) 403 Forbidden.
03:12:47 PM: Error=BadAuthentication
```

It looks like at 3:12:10 it was able to connect to my calendar ok, but at 3:12:47 it wasnt.

---

It could be related to the new password encryption that was added to the latest version (although there should be an error in the log if it fails). You could try to enable Options->Advanced->"Use custom password encryption" and see if it works then. Note that you need to create the Google calendar into Rainlendar again after changing the setting.

---

## Re:Dont see Google Calendar Data

Same error for me, and also 64bit ubuntu

```
22:51:49: Network Shared Calendar (1.10.128)
22:51:49: Google Calendar (1.10.128)
22:51:50: Created backup file "/home/malte/.config/.rainlendar2/backups/20130129-Rainlendar2Backup.zip"
22:51:53: Fish-master@gmx.net: Authenticating...
22:51:53: Fish-master@gmx.net: Result: (0) 403 Forbidden.
22:51:53: Error=BadAuthentication
```

## Re:Dont see Google Calendar Data

Posted by maltesa - 2013/01/29 16:31

---

Now it works.

I remove rainlendar, and removed /home/user/.config/rainlendar folder. Then i installed rainlendar again, added my licence. restarted. added the option for custom encryption. restarted. added my google calender, and it worked :) Thanks!

---

This solution seemed to work. Should "Use custom password encryption" be enabled by default then?

---

## Re:Dont see Google Calendar Data

Posted by Rainy - 2013/02/03 04:53

---

The custom password encryption is not as secure as the operating system specific method so unless there will be a lot of similar issues it should not be the default setting.

---
