

Rainlendar segfaults in OpenSUSE 12.1

Posted by lward69 - 2013/01/23 14:26

Hello,

Rainlendar recently stopped working for me under OpenSUSE 12.1. It was working fine, but I'm guessing some package got upgraded and it caused it to stop working. I tried to include what I thought would be useful, but if you need more information let me know. Thanks!

Here's the debug output in gdb:

```

Re: Rainlendar segfaults in OpenSUSE 12.1

Posted by Rainy - 2013/01/24 13:32

If you run the backtrace (bt) in the debugger does it show the call stack for the crash?

Re: Rainlendar segfaults in OpenSUSE 12.1

Yes, here it is:

(gdb) bt

Re: Rainlendar segfaults in OpenSUSE 12.1

That's a known issue. Rainlendar crashes if it tries to open a dialog before it is fully initialized (e.g. if you try to start a second instance). The bug will be fixed in the next version. If you cannot get the application to start you can delete the settings file or revert back to the previous version.
