
line up windows at te bottom of the screen PROBLEM

Posted by nonhocapito - 2007/01/18 23:06

I have snapped the rainlendar windows at the bottom of the screen.

The problem is that when the 'to do' list grows, instead of growing upward, it grows downward, so that the new items are hidden. If for instance I put the to do list above the calendar window, same thing: it pushes down the calendar window until it disappears beneath the bottom of the screen!

before you ask, I don't want to snap the window at the top of the screen because I keep my taskbar there. Plus icons and wallpaper make it perfect for rainlendar to stay at the bottom (I'm not negotiating that! :))

Is there any way to actually let rainlendar windows to stick to their snapped sides and grow in the opposite direction?

--thanks for any suggestion you may have

That is not possible in the current version (2.0.2) but the feature is planned for future releases.

ok, thanks!

please put it among the top priority things.

Us taskbar-at-the-top minority users are always discriminated. :)
