## Week numbers are off

Posted by he\_the\_great - 2013/01/24 10:43

---

According to this site, the ISO standard defines the first week as the first week to contain Thursday.

<http://www.epochconverter.com/epoch/weeknumbers.php>

I don't know what that means for the end of the year.

The ISO standard for weeks number, although it's a standard, it not used everywhere.  
See this entry in Wikipedia: [http://en.wikipedia.org/wiki/Seven-day\\_week#Week\\_numbering](http://en.wikipedia.org/wiki/Seven-day_week#Week_numbering)

On some skins (at least on Shadow4) you can change a delta week number to match your definition.

By default Rainlendar uses the ISO standard for the week numbering so no changes are made to the settings the calendar will show the week numbers as the standard says.

Jorge\_Luis, thanks for the offset. It is an app setting not skin btw.

Rainy, maybe I have old configuration, but this year it had the week of January 1st (Tuesday) as week 52.

There is a known issue, that the week number of year-end maybe has offset if you set Sunday as the first day of week.

If it is, you need to set : Options > Advanced > "Week number delta" to match the correct week number. (perhaps every year all need to do once)
