Autohide improvement suggestion(s)

Posted by kzinnato - 2013/01/25 18:42

_____

Instead of mouseover anywhere that Rainlendar was left on screen, is there a way to have it autohide by minimizing itself to the right so I have to mouseover the very farthest right part of the screen to get it to maximize out.

Currently, if I mouseover anywhere that the calendar is on screen it pops up.

An acceptable alternative would be for a mouseover delay. If I had to have my mouse on the section of screen where Rainlendar is for 2 or 3 seconds before it became visible, then that would stop it from popping up so much.

Just my two cents ... thanks for considering.

Welcome to the forum, kzinnato.

You can play with the "Click through (hold Shift-key down to deactivate)" option in the General tab. In this way, unless the active window is Rainlendar, the popups won't show.
Also, you can change the Normal opacity, to keep it almost-invisible.
Or double clicking in the taskbar icon you can show/hide all the windows (this option can be changed)
