## Changing the \"event dots\"

Posted by Kea - 2013/01/29 11:38

---

Hi; I love everything about the Chromophore skin except the little tiny white dots that it shows on the day & week views. How can I adjust them so that something more than a tiny dot shows? (they are hard to hover over & click on)

Thanks

I think, the workarounds is make "Summary" be shown, then you can click the region of summary :

- a. Set event has different end time with start time, like 08:00 ~ 08:30.
- b. Change the values of "Time item duration", like 15 minutes.
- c. Increase the values of "Time item height", like 90.
