## Installing Addon asking for new Shadow4?

Posted by robj - 2013/02/03 09:44

---

Hi all,

I'm trying to install the year planner from <http://jorgeluis-jorgeluis.deviantart.com/art/More-Calendar-1-1-3-189789233> but I get the message:

This skin addon is for version 1.9 of the skin.  
The installed version is 1.10.

When I click OK the installation fails.

It's a brand new install of Rainlendar so do I need to downgrade is or is something else wrong?

Thanks, Rob.

Welcome to the forum, Rob.

I update the skin file to made it possible to run with the last version of Shadow4, you can download it again from the deviantART site.

Although there is no difference, Rainlendar supposes that skin needs to be updated... but really not.

Thanks Jorge, I have installed that now thanks.

Have a bug I think when you choose align by weekday where the number appear to collapse in to one column.

I try with a fresh profile and I can't reproduce this.

Check if there is any error in the log file

([http://www.rainlendar.net/cms/index.php?option=com\\_easyfaq&Itemid=26#faq21](http://www.rainlendar.net/cms/index.php?option=com_easyfaq&Itemid=26#faq21))

EDIT: I'm using the latest beta. I check the release version and I can confirm what you say. Some line of code doesn't work with the stable version (but don't know which).

Try download the latest beta 127

([http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=7&id=18449](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=7&id=18449)) and replace the installed files with those. Latest betas fix several bugs along the way.

Can't see a log file, but I might be missing something.

---

Have found if I toggle one of my calendars it does render properly.

@Jorge\_Luis: the issue is also happen on my PC (Win XP).  
It happen on every time start and Refresh.  
You need to add (enable) Rainlendar\_Redraw(), when init.  
Currently, the downloading file is no (disable) Rainlendar\_Redraw().

Thanks anoob, you are completely right.  
This was one of my first skins, and now I remember having troubles with the way it shows the weekdays. That's why I disable the Redraw and only keep 2 Refresh... but only on some situations. I added the right Redraws in the script file and update (again) the skin in deviantART.  
Rob, you can download it again, I hope without any (new) bug :)

EDIT: I start having troubles... then, I realize that build 127 isn't the latest one, but the last stable version is build 128...  
Going off for vacations not always helps...
