## iCloud sync produces (0) 412 Precondition Failed

Posted by billfish - 2013/02/12 13:46

---

A new event gets uploaded to iCloud, but returns this error message or the message 403. Then Rainlendar maybe crashes. Then I get the 412 message when it syncs.

Windows 7, Rainlendar version 2.11 (b128) 32 bit.

Is this something else than what you already reported in here:

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&func=view&Itemid=42&catid=4&id=18807#18807](http://www.rainlendar.net/cms/index.php?option=com_kunena&func=view&Itemid=42&catid=4&id=18807#18807)

Now that I see your explanation for the phenomenon in my other post, I would guess that these are the same, just different symptoms. Thanks for your quick response and I await the next update. Meanwhile things are actually working despite odd messages and occasional crashes.
