## Exporting Calendar events in iCal format

Posted by piuscmi - 2013/02/13 15:32

---

I have been trying to export my calendar events from my Rainlendar Pro(2.11) in iCalendar/ics format but the file turns out empty, with the message "Exported 0 Events successfully".

Your advice will be appreciated!

With best wishes.

Pius

I don't try to be rude but..., did you select the events you want to export before clicking on Export? or you're trying to export all of them?

Supposing you did that, which kind of calendar is? local, network, CalDav, Google? which O.S. are you using? If this could be a bug more info is needed.

Thanks a million for your prompt help!

I have done it now successfully.

What I wanted was to export all the events.

So when I chose the export under File, I assumed, it is going to export all the events.

I didn't know that I had to select all the events I wanted to export!

Anyway, after receiving your message, I selected all the events with ctrl+A and then clicked on Export and all the events were successfully exported.

Once again, thank you for your prompt help.

With best wishes

Pius
