
Mail for exchange - Hotmail Calendar

Posted by wibble_wobble - 2013/02/13 16:50

G'day Rainlendar Forums,

I have for a while now been pondering why I can easily setup via 'mail for exchange' on my nokia 808 to access and modify in any way my hotmail calendar, yet nothing on a PC seems to be able to perform this sync outside a microsoft program?

So my question is - can the 'mail for exchange' feature that is on most phones be implemented for rainlendar, or is this a task that requires API to be released from microsoft?

If implemented I would be immediately paying for the the license if that's any incentive B)
