
Macintosh Products - Auto Sync - Not icloud

Posted by spikul - 2013/02/26 09:01

Is there a way to auto sync Rainlendar events with Apple's Calendar on a local server and not have to manually import and export? Would use just Rainlendar, but can't.

I am going to be in a Mac/Win environment and have ipad, ipod, MacBook Pro, Desktop Mac and Apple Server to use.

Any Ideas outside of iCloud would be helpful.

Rainlendar is able to sync with Apple's iCloud calendar. See here for details:
