## [Solved] How to filter no due date tasks ?

Posted by anoob - 2013/03/06 12:35

---

As title.

I know how to use Rainlendar\_ListAllComponents(), but it can only return all events/tasks or just on a specific day. If I only want to look no due date tasks, how can I do ?

I can think in getting all components, then filter only those which are task (they begin with "BEGIN:VTODO") and then looking one by one for those which doesn't have "DUE:" in the iCalendar data? (this could be made capturing "DUE:(.-)\n", and if it's null then it doesn't have a due date)

The events in the table can be removed if you need a short table (in <http://stackoverflow.com/questions/12394841/safely-remove-items-from-an-array-table-while-iterating> there is a very good way to do this in a O(n) complexity)
