
Installation of Rainlendar Pro fails

Posted by Christina - 2013/03/11 04:06

Hi,

today I tried to install the new Rainlendar Pro Version, but the installer doesn't appear. I tried to do this without my Norton AntVirus with the same result.

I hope you can help me, because I love the Rainlendar software.

Cheers
Christina

I have the same problem in Ubuntu using the Software Centre. It doesn't see the latest version being newer than what I have even though it is.

My current installed version is 2.11 (b128)

I do not know why that is so. Have you get any error messages ? Where did you download from ? What is the file's name that you downloaded ?

Recommend you re-download it from :

http://www.rainlendar.net/cms/index.php?option=com_rny_download&all=1

then try again.

Tank you so much!

Now I downloaded it from your link - and it works. Nice!

Yesterday I downloaded the file from this site:

http://www.rainlendar.net/cms/index.php?option=com_rny_download&Itemid=30 - it seems to be a different file.
