## Error from calendar on ftp

Posted by Thomas Helzle - 2013/03/11 06:18

---

Hey,

I installed the Windows x64 update to 2.11.1 Pro today and suddenly I get an error message each time rainlendar does access the two calendars I use.

Both are accessed via ftp on a local "Fritzbox" (a DSL Router with USB port where a USB-Stick holds the data). This worked just fine until today.

Rainlendar then shows the calendars both successfully it seems, but I'm unsure what's going on.

I then created a new event in one of the calendars - the problem went away for that one.

Then I removed that event and the problem was back.

Any Idea what the problem could be?

Thanks!

Tom

Edit: Forgot to add: Windows 8 Pro x64

There was a small issue with the 64bit build. I recompiled the application so please download the installer again and reinstall.

Thanks a lot! I'll try it ASAP.

Cheers,

Tom

That seems to have fixed it - thank you very much for the fast help!

Cheers,

Tom
