
Mountain Lion - crashes trying to add Mac iCal

Posted by billfish - 2013/03/13 11:26

Just got Mountain Lion - installing Rainlendar - o boy - able to add Google calendars and net calendars but if I click "Mac iCal" and go, Rainlendar crashes every time. Will send log but - where is it in Mac OS?

I think this was caused by a change in one of the interfaces that wasn't made in the Mac specific iCal plugin. I recompiled the Mac build so please download the it again and see if it works now.

Holy Mazola! Is this service or what!? Complain at 10:30, recompile at 12:30. All hail Rainy!

Yes, it works now. (The build number still appears to be 129.) Why doesn't everybody use this program?
