## Manager only searching titles and not content

Posted by cormie - 2013/03/13 15:34

---

Have been a rainlendar user for years and it's an essential part of my daily organising. However, before whenever I had to recap on the past, I'd just open up manager and could find an event by putting in relative words. Now since the Manager changed, I see you can only search for what's in the event title and not the body. This is a big downgrade for me. Is there any way to get the old search back and just search everything?

I'm looking for a possibility to also include the description texts to the manager's list so that it would be possible to search them too. So, the feature is planned to be brought back.

Hi Rainy, that would be great, it's a pretty essential feature for me and I've used it a lot in the past to quickly find reference points while on phone calls etc. Very handy so would love to see it back.

Luckily doing a search on [google.com/calendar](http://google.com/calendar) will yield results from the description until then :)

I'm new to your software but like what I see. The feature cormie is talking about is important to me too. I use google calendar for work and am struggling to find a Linux application to replicate the calendar side of Outlook (which I synch with google). I use the agenda view almost exclusively so your manager is exactly what I want, especially if it included descriptions.

The date and time text in Manager is tiny on my machine (Linux Mint 14, 24" monitor 1920x1200). Maybe I've got something set wrong.....
