Hi,

hope my English is good for you ;)

My Problem:

I've bought Rainlendar 2.0.2 and installed it. Then i go to Properties and give them the Informations about my Outlook2000.

I will see, that he imports the Dates and every Event is visible BUT:

he Import only the Startdate, Enddate, Recurring and Calendars that i have make in Outlook.

I can't see the Description of the Event.

The same is when i make a "ToDo".

In the Calendar on the Desktop i will see the Day marked but no description of the Event is filled in and no description of the ToDo ist filled in.

Hope someone can help me.

It's a known bug in the Outlook 2000 support. The problem will be fixed in the next version.
