
Event List Type Color

Posted by billfish - 2013/03/15 08:39

Using Shadow4 Skin with Event List window. Events from one of my calendars have blue type, others white - I'd like to be able to adjust the type color for other calendars - where is it getting this value? I've tried changing various values in Windows > Settings and in Options > Skins > Categories and in Options > Categories but haven't hit the right one -- Thanks.

The "Text color" in the category editor defines the color of the text in the event and to do lists.
