## Asks to update to a newer, already loaded version

Posted by AndyS01 - 2013/03/17 12:27

---

Every time I reboot, I get a Rainlendar popup asking if I want to download a newer version, but I already have this version installed (I actually did the download and it said it was already installed). How can I prevent this from happening?

I'm running Windows 7, Rainlendar Pro Version 2.11 (b128) 32 bit.

The last version is build 129, which is the stable version 2.11.1 (can be downloaded in the Download section). I already mention to Rainy the confusion caused by the dialog's url link and message.

Thank you. After I installed b129, the popup is gone.
