
Outlook.com two-way sync

Posted by Pykmi - 2013/03/20 02:46

Is there a feature in pro version where you could sync your calender both ways between Outlook.com and rainlendar?

At the moment, no. At least previously their API didn't make it possible to create a full sync with Rainlendar. I think they've improved the API since then but I haven't had time to check if the support could be implemented now.
