
Rainlendar does not open on windows startup

Posted by kana48 - 2013/03/24 20:29

Hi friends.

I am experiencing an odd behavior of the Railendar2 since I installed the latest stable build 2.11.1 b129.

The program does not start on windows startup.

I tried to do this:

- uncheck the "Enable on startup" check box from OPTION and save;
- check again the "Enable on startup" check box from OPTION and save;

but it does not fix the trouble.

I tried, also, to put in the STARTUP folder a shortcut of Rainlendar2, but the Rainlendar2 does not start.

In the system register the item "Rainlendar2" is present at key

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run

My OS is Windows 7 pro sp1 32bit.

Thank you for your kind help.

Does this happen only with Rainlendar? If you e.g. put link to Notepad to the startup folder does it open correctly?

Yes, the Notepad opens correctly, but, very odd, the Rainlendar2 open at startup as second instance too!!!! :blink: I do not know why. Then I delete the Notepad and Railendar2 links from Startup folder and now the Rainlendar2 seems to open correctly too. Windows stays always a big mystery for me.

Thank you for your suggestion.

Have a nice day.
