## To Do: Character Limit

Posted by spimps - 2013/03/25 06:53

Hi,

I'm running Win7 x64 with Rainlendar Pro 2.11.1 (b129) 32 bit, linked with Outlook 2010 to sync Calendar and Tasks.

I use the text box in To Do to record notes for my clients for a whole month before creating a new To Do.

I've got to a point where there are about 600 words and adding any more would make the text disappear from Rainlendar, however in Outlook I can still see it under Tasks with all the texts.

I'd rather not send a sample as there are some sensitive information, but I can consistently generate the issue.

- 1.) Go to <http://www.lipsum.com> to generate 600 words.
- 2.) Paste to a new To Do.
- 3.) Save and close.
- 4.) Re-open the saved To Do to confirm that the text is visible.
- 5.) Now paste another 100 words.
- 6.) Save and close.
- 7.) Re-open saved To Do again... and you will see nothing.

I hope this something that can be fixed!

Thanks in advance.

Nick

True. Reading long descriptions from Outlook seem to fail. I'll see if there is some other way to read the descriptions from the tasks.
