## Rainlender didn't fixed in the position

Posted by quocy - 2013/03/28 04:20

---

after update from 2.11.1 is my Rainlender not more fixed in the position. I've activated it.

My system: MS- W7

Do you mean the "Lock windows in place"-setting? I'm not able to reproduce the problem. Are you using any 3rd party utilities which might affect how windows are moved?

yes, I mean "Lock windows in place"-setting. I use "Shadow4-Calendar.1 an Shadow4-Event List". I locked it in the corner on my desk. this both part mowedsometime after "save the property or start the system" up or down. I can't never say, when it does, it a gamble :huh:

Can you try to find out when exactly the positions changes? It would be much easier to fix the issue if can give a step by step instructions how to reproduce the problem.
