
Rainy crashes constantly

Posted by d0mokun - 2013/03/28 07:02

Hello!

I've been a happy user of Rainy for a good while now, and only recently have I experienced any sort of issue with the software.

I have Rainy set to start when windows boots. It does so but promptly crashes after a few seconds. If I manually start Rainy, it still crashes.

I'm using the x64 registered version with Win8 x64.

Thanks
Dan.

Can you provide a crash dump?

Hello Rainy!

Here you go -> <https://www.dropbox.com/s/yt9k7kdm0x0dtft/Rainlendar2.zip> .

The crash window is a standard Windows "this program must close"

Thanks
Dan.

The crash most likely happens in one of the event alarms. There is a bug in one of the 3rd party libraries Rainlendar uses which can cause this. I'll upgrade the library in the next build. In the mean time you can try the 32bit version and see if it works.

Thanks for your reply!

Rainlendar 2.12 BETA build 130 seems to have sorted the issue out.

Best
Dan.
