## Setting Task-Priority (google)

Posted by Sagehorn - 2013/04/04 20:01

Hi, i'm trying to sort my task by priority, but the drop down is disabled. Isn't it possible to do that with google calendars? I read, that you can somehow change priorities in the todolist.xml. Either that information was wrong or the documentation is not that good. ;) At least I haven't found any definition of categories with the terms etc. I also read, that you can combine priorities with colours etc. All that stuff didn't work here.

What can I do?

I think it would be a nice feature ;)

The following is taken from the help file:

Task list: The task list can be arranged by different criteria (alphabetically, by due date, by category, ...) from the context menu. You can define a primary and secondary sorting order. It's also possible to use a custom sorting order where you can just drag the items to different positions. The context menu also has options to hide the completed, canceled and/or upcoming tasks from the list.

[http://www.rainlendar.net/cms/images/fbfiles/images/task\\_list\\_menu.png](http://www.rainlendar.net/cms/images/fbfiles/images/task_list_menu.png)

Add:

But, I found, Google-task seems not support custom sorting order, everytime I drag one Google-task item to another position, it will go back at few seconds later.

But, I found, Google-task seems not support custom sorting order, everytime I drag one Google-task item to another position, it will go back at few seconds later.

this is not quite right. for instance, i can sort my tasks by status, so that there are the headings (translated) "in machining" and "machining necessary".

but i cant "drag" the priority-tasks into the different positions (are the headings meant by this?), because the priority-feature is disabled ;)

would be interesting to know, if those sorting-attributes depend on the google database. at least some don't

Yes, this is what I mean.

Google Tasks do not support priority so even if you might be able to set it somehow in Rainlendar the value will be forgotten as soon as the task is read back from Google.
