
Rainlendar 2.12 BETA build 130

Posted by Rainy - 2013/04/07 11:43

Build 130 can be downloaded from here:

Windows (32-bit): Rainlendar-2.12.b130-32bit.zip
Windows (64-bit): Rainlendar-2.12.b130-64bit.zip
Linux TAR (32-bit): Rainlendar-2.12.b130-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.12.b130-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.12.b130-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.12.b130-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.12.b130.dmg

MD5SUMS-b130

Notes: Time zones do not work yet with Outlook or Google calendar.

This is beta version! It has not been tested.

Changes:

- o Toodledo plugin crashed when polling with offline file enabled.
- o The manager can show and search the description field now too.
- o All windows can be moved at once by holding shift key down.
- o Portable installation uses custom password encoding by default.
- o Read-only events and tasks can be now opened to the editor but the changes cannot be saved.
- o Added confirmation if all skin windows are activated at once.
- o Moved the Google Tasks to a separate plugin.
- o Reading long descriptions from Outlook failed.
- o Right alt+a selected the text in the description field.
- o The expired Toodledo authentication token was not updated if the folder was defined in for the calendar.
- o Manager allowed to delete items from read-only calendars.

After update to this version, I found:

1) Every time start Rainlendar will get a warning window, even I click "Cancel" :
http://www.rainlendar.net/cms/images/fbfiles/images/2013_04_09_1.png

And I found, this is because: tasks only been setting due-time, no setting start-time. But, that is what I add tasks usually.

2) o Read-only events and tasks can be now opened to the editor but the changes cannot be saved.If there is more than one ics-file. And if user did not notice the event/task is read-only, may still be saved it to another ics-file.

3) "Change fields" not work, can only change "Type".

4) How to use the new option "Time zone", in Options > Calendar ?

Can you provide examples to explain how it works ?

Because it not works like I think: set with timezone's time, and convert to display my local time.

5) From b121, can not setting event/task recurrence on more than 100 days later, for to do it I must manual modify ics file.(not really important, just complain)

1. I'm not able to reproduce this. If I set the start time to a task it will be there when the task is edited again. Does this happen with some 3rd party calendar or also with native Rainlendar tasks?

2. Hmm... that should not be possible. If the event is marked as read-only the ok button will be disabled so the changes can't be applied. Note that this is different than making the whole calendar read-only.

3. There was a typo and the changes were set to a temporary event instead to the real one. I'll fix that.

4. Currently the events will be written to the ics file in the given time zone. Events from different time zones are also converted automatically to the local time in Rainlendar. So, currently there is not much to do with the setting unless you share the ics files with other calendars that use different time zone.

5. I had to choose some values for the spin control so they are now 1 and 100. The upper limit can be increased if it is too limiting.

Sorry, my broken English and did not explain clearly.

1) Fixed: If the task only set start time or end time, a warning window will appear each time you start the rainlendar. (I'm not use 3rd party calendar)

2) Ohh! I am talking about: whole calendar read-only. But as I mentioned, just hope can be avoided.

3) 4) Thanks.

5) If you do not trouble, hoping to increase to 400, because my greatest cycle is 300.

1. Ok. The alarm at least causes an assert if the start time is not set. I'll fix that.

5. Sure. I'll change that.

I had the problem 1 again when adding a task. Then remember this bug and add the start time. What I don't understand is why if I set the start and end time of a task at the same moment (DTSTART and DUE are the same values) in the calendar it shows 2 days.

I fixed the problem with the two day tasks. It also was causing an assert so that should not happen anymore in this situation.

I found another bug related with this one: if the "show in calendar" is unchecked, there's no problem with the dates (start only, due only, both). But if it's checked, "start only" causes an assert (in wxDateTime::Subtract).
