
Newbie question

Posted by algermon99 - 2013/04/13 13:54

I've looked around a bit but can't find the answer to this question, which must have been asked many times before, so I apologize for duplicating others' questions--but here goes:

Can I get the calendar gadget on my Windows 7 desktop to display in the normal US calendar format which starts each week with a Sunday and moves to the right to Saturday? The way it looks now, it starts on Monday and goes to Sunday. I'm not going to use any of the other features--I just want this month's calendar displaying on my desktop....

Thanks.

Rich

Welcome to the forum, Rich.

I think that even if you're "newbie" and someone else has asked this, it's good to have new users, that means that the developer will continue supporting this program... :)

To change the start weekday: Right click on a window -> options... -> general -> Week's start day -> Sunday (it's the first dropdown list in the tab).

Thanks. I can't think why I couldn't find that on my own.

New Question:

In exploring the options, I clicked on the names of the three provided skins. I didn't want to change from the default skins, but when I clicked out of the options, it changed it to the skin that I'd last clicked on. Bummer. So now the question is, how do I get back to the default non-skin?

Re: Newbie question

The default skin's name is Shadow4 so you can just choose it from the list.
