
Not accepting correct time of events

Posted by keithy397 - 2013/04/18 02:51

Hi,

I'm using the Beta 130 on XP.

It appears each new entry adds one hour to the time I actually enter.

This is an image of the warning I get.

<http://www.rainlendar.net/cms/images/fbfiles/images/RainlendarProb01.jpg>

Any ideas for a fix please?

Can you tell what time zone you have? Are you saving the event to a local *.ics file? Have you defined any time zone for the calendar in the settings?

Hi Rainy,

I'm in the UK and we're now on BST (our summer time).

I'm assuming I am saving to an .ics file that I named years ago.

I haven't defined any time zone setting as I can't find one, but that may explain the hour difference??? Having said that, I've reinstalled the 2.11 beta 127 and things are back to normal.

Cheers,
Keith

The British time seems to be a special case. The date conversion mistakes it as UTC. I'll fix that.

Marvelous! Thanks Rainy.

Hi Rainy,

it appears I'm having the same, or similar problem again?

<http://www.rainlendar.net/cms/images/fbfiles/images/ScreenShot004-9383aeb06f26ae026be80233bc06ba02.jpg>

(Beta 133 on XP)

The assert is different so it's probably not the same problem. Seems like the event is defined on invalid month. When do you get this error?

Every time I try to insert a new event / reminder.
