
Most distant date in the past?

Posted by bee2see - 2013/04/22 14:39

What is the most distant date in the past possible?

It looks like, it's not possible to set the date > 260 years in the past (i.e. before 1753). Just curious, why this year?

I'm asking, because I have quite a lot of famous historical dates in my calendar (like 'Big Battle A in year 1654', 'Accession of King B in year 1234' etc). Looks like all dates before 1753 are not valid anymore.

Is it possible to fix it somehow?

I have the same question when I started using Rainlendar.

Here's the answer from the developer:

OK, clear, thank you.

I think, this question is a good candidate for Rainlendar FAQ.

By the way, the format "name ()" still works even for the older dates.

So it could be the workaround for the issue.

For example, if "Big Battle" has happened on 3 September 1752, it should be something like the following:

"Big Battle ()", setting the date just to "3 September 1900"
