## Errors when using Backup

Posted by mverk - 2013/05/05 07:40

---

I was using Rainlender-Lite 2.11.1 on Windows 8 without any problem.  
Yesterday I installed Rainlender-Lite 2.11.1 on Windows 7 and used the Rainlender Backup of Windows 8 for conversion.  
That didn't work!!!:

I got the message: Write error, file C:\users\Rien\Rainlender\Default.ics cannot be opened to write.

I went on and to my surprise all the data showed up and was correct!

But after I made an update in one of the tasks the same error message was shown.

One remark: Rainlender datafiles in Windows 7 are NOT in C but on K, the same unit as for Windows 7!!!

Please help me, I tried already so much (import, recover etc.) without the good result

I don't want to use the C: partition for my Rainlender files but the K: partition because that's the unit with my Windows 8 installation!

Please again, can you give me a solution for my problem?

Ohh! you seems have not look clear.

Have you try to do something, like it said: try to change the values of "Filename" to "default.ics" or "\default.ics" or where the ics-file is at.
