## Show check box for hiding/displaying calendars

Posted by Danny\_DeLoach - 2013/05/07 12:22

---

On the skin that I am using I would like to have check boxes available, so that I can easily decide which calendars to display. Could someone either tell me the code I need to include in my skin to do this? Or, can someone point me toward a skin that already does this and I could learn from that resource? Thanks.

You want a calendar's list? there is one in the default Shadow4 skin.

If you want to made a calendar's list from the skin you're using see shadow4.r2skin/xml/calendarlist.xml  
Those items selected as elements (font.x, bitmap.x) MUST be defined in /xml/elements.xml  
And the files used in elements.xml are stored in /images folder.
