## how to change today, tomorrow in the skin

Posted by smint - 2007/01/23 06:06

---

I use the skin shadow4 in german. The skin shows today, tomorrow, in one week.... But I would like to have the day and date on the skin. This is possible? May be I must choose another skin? Which one? English language is no problem.

If you want to bypass the defaults, go to:

Options > Advanced > EventListHeaderFormat

and put in the wanted formatcodes.

These formatcodes and an explanation can be found in the Help-file.

I know, but I did not find a correct formatcode, for example, Mo. 22.01.
