
Sync with Outlook 2013

Posted by cyrus.jones - 2013/05/16 05:53

Hi, after upgrade on Outlook 2013 (upgrade from 2010 or clean installation) I've got problems with sync.

I can add event thru Rainlendar, event is written in Outlook, but not syncing.

I've found out, when I edit event in Outlook and save (or only open and save), the event is sync with MS servers and then with other my Outlooks.

Is possible how to fix this? It's only few more clicks, but when I forget to do it, my event is only local :(

Oh and one more thing. After editing in Outlook very strange chinese signs appears in comment of my event: U4

I am using latest beta 2.12 b130, Windows 8 x64, Office 2013 Pro and Rainlendar is located into czech.

THX
