
Rainlendar 2.12 BETA build 131

Posted by Rainy - 2013/05/19 06:41

Build 131 can be downloaded from here:

Windows (32-bit): Rainlendar-2.12.b131-32bit.zip
Windows (64-bit): Rainlendar-2.12.b131-64bit.zip
Linux TAR (32-bit): Rainlendar-2.12.b131-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.12.b131-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.12.b131-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.12.b131-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.12.b131.dmg

MD5SUMS-b131

This is beta version! It has not been tested.

Changes:

- o Added "Event min height" setting for the day and weekviews.
- o Chromophore skin has a large calendar window.
- o Added colorless and dark versions for the Chromophore skin.
- o The message store setting in the new calendar wizard did not get set properly.
- o The times were saved incorrectly if the local time was set to British time zone.
- o the "uppercase" attribute for the font can convert the text now also to lowercase or capitalize it.
- o Lua scripts can be put to the Scripts folder under the config folder too.
- o Skin addons can be applied to different skin version (although this might break the skin).
- o The time item which shows only the week number is mapped to the first day of the week so that it is the same number as in the calendar.
- o The z-position can be set separately for each window in the skin.
- o Added advanced option to bring all windows on top when any of them is clicked.
- o The hidden Google calendars are also hidden in Rainlendar.
- o Tasks were shown on two days in the calendar window.
- o The tray icon can now show also the week number (See "Number in tray" advanced setting). Note that this only works if the tray icon image has enough frames.

Good job Rainy !

v2.12 POT file for localization ?

Re:Rainlendar 2.12 BETA build 131

Lou, usually Rainy updates the pot file 1 or 2 build versions before the next stable release (unless he submit an

intermediate one).

I'm afraid the link with Google Tasks has disappeared from build 131. Looking at the Options window under Google Calendar there no longer is a field where the name of the task list can be specified. Without ability to specify the name, nothing appears on the todo list.

The documentation within the help file for this version still reports the presence of a "task list name" so the documentation no longer matches the interface.

Re:Rainlendar 2.12 BETA build 131

The Google Tasks were moved to a separate plugin so they are not part of the Google Calendar anymore. You need to create a new calendar and choose the "Google Tasks" from the list.

Same problem as - Rainlendar 2.11 BETA build 127

Posted by ren7o - 2013/06/26 03:07

Every event which past the current day will be not shown in the list. No matter what You set in setting. (I mean the number of future or past days the list shows...) It is not working on local iCalendar as well.

See last post on the first page of the Rainlendar 2.11 BETA build 127Rainlendar 2.11 BETA build 127 thread.

Thanks

Re: Same problem as - Rainlendar 2.11 BETA build 127

Posted by Rainy - 2013/06/26 03:25

The bug that caused the list not to show the future events was already fixed in version 2.11.1 so if that happens still with the latest beta version then it's some other bug. Can you send the debug log to the Rainlendar's support address?

Don't understand it but now after the restart it shows everything correctly. May be it will work now!
It seems it is OK.. hmm.
Thank You for Your fast answer!
