
Changing Title text of a window

Posted by GrouchyGaijin - 2013/05/25 01:08

Hi Folks,

I'm a noob so this may be a dumb question.

I found a skin I like and edited the xml files to make it look the way I want except I don't know how to change the window title.

I mean the white text in this screenshot:Events list screenshot

Specifically where is the font, color and text for the title set?

Below is the code for the events list xml:

Thank you,

I really appreciate the help!

Welcome to the forum, GrouchyGaijin.

The Window-Title is not using a string, but using a image that include title-text and background.
The code-line is :

The files of images are on (e.g. shadow4.skin) :
shadow4.skin\images\Events-bg-.png

So, you can create a new image and replace the old one.

Or, modify the code-line as :

(note, this will no background, unless to add a new background-code-line.)

I made some time ago a Labeled List for Shadow4 skin. Maybe this helps you:

Hi Guys,

Thank you for the answers.

This skin is actually called My Basic Calendar but it is probably very similar to Shadow4.

In any case, I found the bg image for the event's list and thought I'd just edit the image. So, I made a duplicate of the original png and then changed the text to Google Tasks.

Well, I had to make the font really small to fit into the image and when I refreshed R2 I had a very small Google Tasks instead of a nice looking TO DO:

So I thought I'd just increase the font size. When I did that, I also increased the canvas size to fit the text in comfortably.

I ended up with Google Taskssssssssssssssssssssss

Any ideas about what I need to do?

Thank you,

GG http://www.rainlendar.net/cms/images/fbfiles/images/ToDo_bg_English-88ae04069f006cd19450b2c6f02595da.png

Can you post the modified image ? not the original one.

Then I maybe can help you for what you need to do.

Basically, you need to modify todolist.xml file.

Found this code-line:

change as margins="100,0,0,0" (just sample)

Here is the offending image.

Thank you!

I really appreciate the help.

Odd when I look at the png on my system it looks fine, but attached to the message here, it seems blank.

second try with the png

Dou! Could be because my text is white. :P http://www.rainlendar.net/cms/images/fbfiles/images/ToDo_bg_English-403e1698d844fd4ff3fc4bc95b054ef8.png

OK, download the image, use painter.exe can see it.
And just like I said previously, to modify todolist.xml file, find the code-line :

change as margins="105,0,8,0".

Thank you.

I decided that the font I was using didn't look good so I changed the font to LCDMono Bold.
I had to play with the font size a bit, because with the new font, the margins that you suggested didn't work very well.

How do you know what the margins should be?

I thought maybe it is based on the png size, except the png I uploaded is 108 px wide and the margin you suggested has 105 as one of the values.

I'd like to use an image that is a bit larger for the events background, because as it is, I'm using G. Calendar instead of Google Calendar because I run out of room on the canvas.
(When I tried making the canvas larger I had display problems. Also related to the margins?)

I'm used to Conky and this xml stuff is quite a bit different than just laying everything out in simple code (example `$(font)`)
:blink:

You can see a screenshot of my desktop here.

The Google stuff, the calendar and the month calendar in the middle are R2. The rest is Conky

I am also not very clear the usage of "margins", but after repeated attempts, I get the idea:
If image-width is "108" pixel, and string(Google Tasks)-width is "100" pixel,
when use margins="left, up, right, down"
"left" must greater than "100", smaller than "108",
"right" must smaller than "108 - 100"

I had not use Conky, so I do not know what different between them.

I'm sorry I don't quite understand.
Do you have any idea what I need to do to increase the attached png (the text is white) so that I can have the words
Google Calendar instead of G. Calendar?

I would think I could simply make the image canvas larger.

OK, I posted a image and explain again.
the image is width 128 ("A")
the string "Google Calendar" is width 120 ("B")
so, "left" can be 120 ~~ 128 ("B")
