## Weather in R2

Posted by GrouchyGaijin - 2013/05/26 13:25

---

Hi Folks,

I see that a lot of people have weather widgets running through R2.  
I found a couple that looked nice, but can't get them to work.

Both use MSN weather.

When I use:

<http://weather.uk.msn.com/hourly.aspx?wealocations=wc:10697>

for the url I get the name of my town and icons for the forecast but no days or temps.

If I use

<http://local.msn.com/worldweather.aspx?eid=10697&q=Falun-SWE>

I get a message about "Weather for destinations around the world."

Any ideas on how I can get the weather to work?

Try

<http://weather.msn.com/RSS.aspx?wealocations=wc:10697&weadegreetype=F>

Hi again,

Thank you, but that link results in just a refreshing message.  
(First I tried with a C, since we use that in Sweden. ;) )
