## Day View Window Hours Cut Off

Posted by bpjw64 - 2013/05/27 10:47

---

Hi,

I am a noob to RainLendar configuration, however I am uncertain as to whether or not this issue can be resolve via a configuration setting. On the Chromophore skin in the Day View Window the hours are being cut off. So when I look at the Day View on the far left of the window all I can see is :00 AM or PM as the case may be.

Is there something I can set to allow the hours on the left to be fully exposed. If I look at the top of the Day View window the "All Day" header is completely visible. I am having the same issue with the All Week Window.

Now this is not an issue is just the Chromophore Skin, I am having issues with other skins primarily in the Day View.

I have 64-Bit Windows 8 Pro, other than this issue all other windows seem to display correctly.

Thanks, Brad [http://www.rainlendar.net/cms/images/fbfiles/images/Day\\_View\\_Screen\\_Print.jpg](http://www.rainlendar.net/cms/images/fbfiles/images/Day_View_Screen_Print.jpg)

Right click the window and choose Windows->Settings->"Day View" and set the "Day view time format" to "%#l %p".
